Tail Lights	Full-color LED taillights / turn indicators	Charging Time	Approx. 3hrs
	Brake Warning Lights / battery status	Standby Duration	Max. 180 days

New Functions:

One-Click Voice Command
After both connections are successful (the remote control is connected to the smart helmet and the helmet is connected to a smartphone via Bluetooth), click the intercom button on the remote control to activate the smartphone's voice assistant service.

Brake Warning Light
Activated when the built-in-accelerometer sensor detects a significant deceleration, the rear lights will be enhanced for a few seconds to draw attention from surrounding traffic.

Anti-Loss Alarm
Prompted when a user's helmet is connected to the LIVALL riding app and the distance between the helmet and smartphone exceeds 15m, both the helmet and smartphone will trigger an alarm to alert the user.

Battery Status
Remaining battery level is shown by the number of the first row of LEDs (BH60SE Neo,MT1 Neo,BH61S Neo), or the number of "V-shaped" LEDs (BH62 Neo), that are displayed when a helmet is initially turned on. Full battery is indicated when all of the LEDs are on.

Auto On/Off
The helmet will be turning off automatically when it is disconnected from phone and keep quiescence for 5 minutes. The helmet will automatically turn on when it moves.
